Professional Summary
Senior DevOps and Cloud Infrastructure Engineer with 7+ years of experience automating distributed systems, managing Kubernetes clusters, and architecting resilient AWS cloud solutions. Expert in Infrastructure as Code (Terraform) and zero-downtime CI/CD deployments.

Technical Skills
? Cloud Platforms: AWS, GCP, Azure
? Containerization & Orchestration: Docker, Kubernetes, Helm, ECS, EKS
? Infrastructure as Code: Terraform, Ansible, CloudFormation
? CI/CD & Automation: GitHub Actions, GitLab CI, Jenkins, Bash, Python
? Monitoring & Observability: Prometheus, Grafana, Datadog, ELK Stack
? Systems: Linux, Networking, Nginx, Security Hardening

Work Experience
Lead DevOps Engineer | SkyScale Networks (2021 - Present)
? Architected multi-region Kubernetes (EKS) infrastructure on AWS handling over 50 million daily API requests.
? Automated infrastructure provisioning using Terraform and GitHub Actions, cutting environment spin-up time from 3 days to 15 minutes.
? Implemented Prometheus and Grafana alerting systems achieving 99.99% infrastructure availability.
? Configured secure Docker container image scanning and vulnerability patch pipelines.

Cloud Infrastructure Engineer | Pacific Cloud Solutions (2018 - 2021)
? Migrated legacy monolithic services to microservices on Docker and AWS ECS.
? Managed PostgreSQL and MySQL database replication, automated backups, and disaster recovery plans.

Key Projects
? K8s-AutoScaler: Custom Kubernetes controller written in Go and Python to scale microservice pods based on message queue depth.
? CloudGuard: Open-source compliance checking tool for Terraform scripts.

Education
Bachelor of Science in Information Technology
University of Washington | 2014 - 2018
